located in 57462 Olpe, Germany.

Medical Reviews  
*Selected Bibliography*  
2011 November

by Ossip N. Groth

Covering all aspects of Medicine, the Life Sciences and overlapping areas from quantum physics to living in space,

this Bibliography contains Medical Review Articles the PubMed records of which were modified in November 2011 and which were rated to be of interest to the users of this Bibliography by subjective decision.

This month gives 15.000 medical articles filtered to be something like a review article, from which about 5200 items have been rated as appropriate to be included in my resources.

Some 1700 records are freely available or they are predicted to be freely available within 2 years of running the searches, so they are covered in my free online database 'Metatextbook of Medicine' at [www.kidney.de](http://www.kidney.de)

Some 3000+ records are not freely available, and only these are indexed in this printed Bibliography.

The records are indexed by a simple IndexMedicus-style system with an OrganSystem.Aspect doubletag.

There is no systematic multitagging of the records, so any paper is covered only once in this printed Bibliography.

The Medline Searches were run with a php based system on [www.kidney.de/sitesearch.php](http://www.kidney.de/sitesearch.php), using the search term **2011/11[PDAT]** and applying the preformatted Review Filter which is **(editorial OR review OR conference OR guideline OR guidelines OR meta-analysis)** The printed list of citations was screened manually, items were entered by scanning barcodes into my special Visual-Basic-based software, then doubletagged on a two-letter-system ultimately to give a .txt database in Medline-style, which would be automatically transformed into the html code of this ebook, then merged in LibreOfficeWriter ultimately to obtain the publication-grade PDF document.

The overall structure of the simplified ontology on which all records were tagged is shown in the appendix to give the user a feeling where to locate items.

Concepts are shown in a somewhat random order, this results from the fact that the original tags are one-letters or one-numbers, hence, **nc** would code for **Kidney/Urology, Neoplasma**, and concepts are ordered by these invisible tags.

In the respective concepts, you will locate those reviews which are appropriate to your interests, and you should be able to obtain items from your library.
